

FooDeliver Final Presentation

Team: yqz

Members: Yu Qiu (yqiu1), Jiaqi Zhang (jiaqiz), Shuhui Yang (shuhuiy)

Overview

Foodeliver is an O2O platform that provides connection between online/physical restaurants and offline consumers.

Foodeliver offers both restaurant and consumer interfaces.

Restaurant owners can manage menu, receive orders and process delivery.

Consumers are able to browse or search restaurants, scan the menu and place orders.

Key-Partners Restaurants	Key Activities Customers search restaurants Customers place order Customer check and update order status Customer manage profile Restaurant manage menu Restaurant check, process and update order status Restaurant manage profile	Value Propositions Help customer order food in a more efficient and effective way Help restaurant enlarge customer groups and business	Customer Relationships Customer coupon	Customer Segments People who want to order food in an efficient and effective way including students and professors

3.1. Overall Architecture

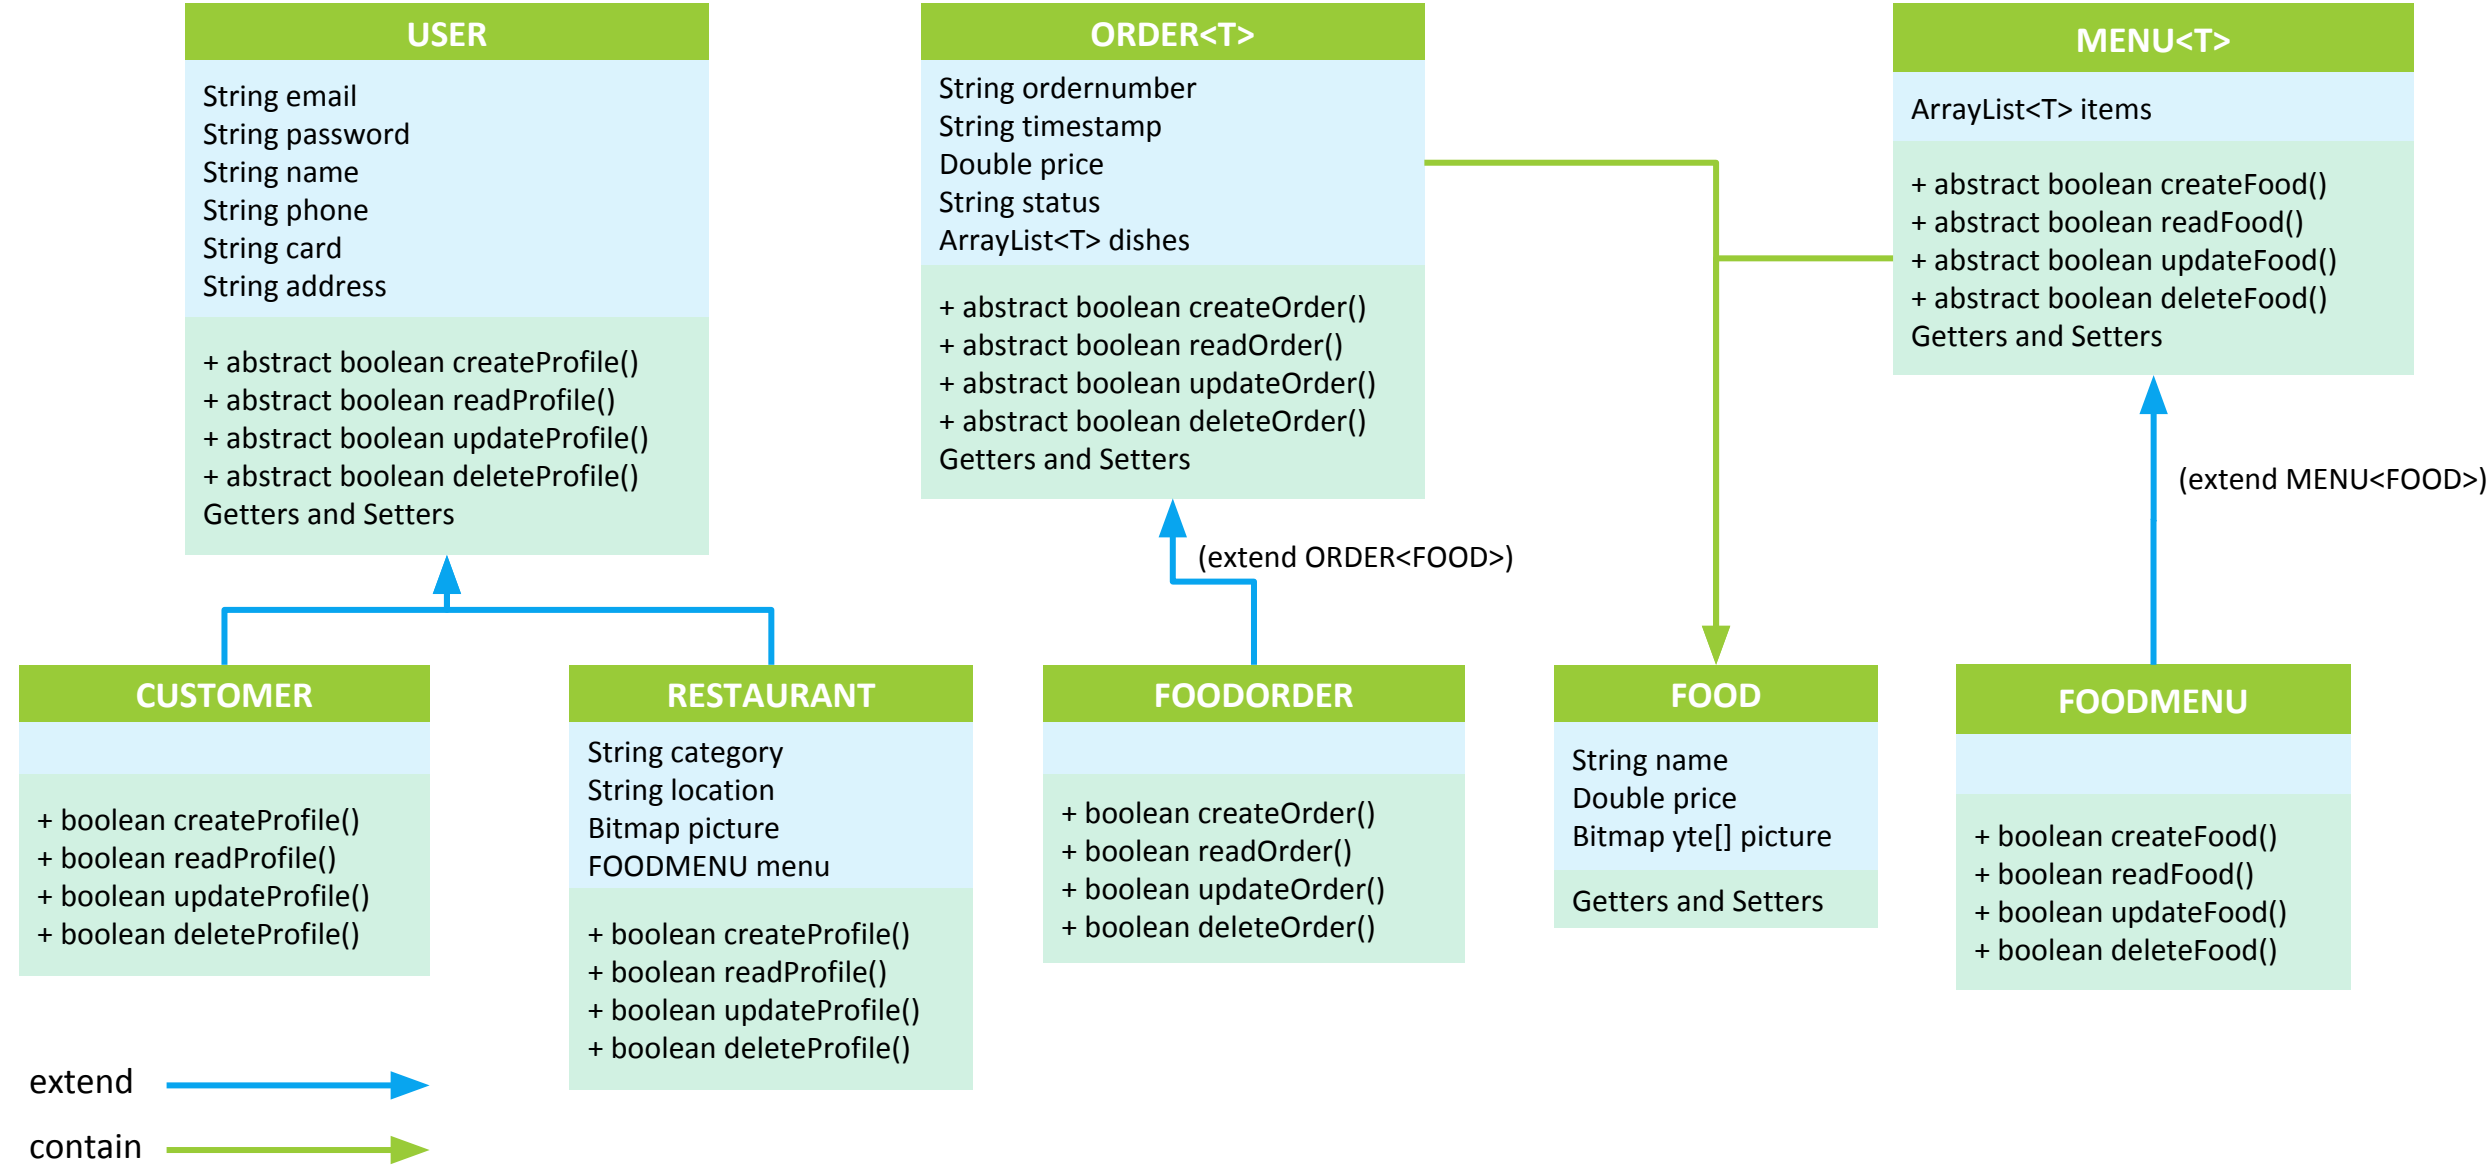

Activity Switch Diagram

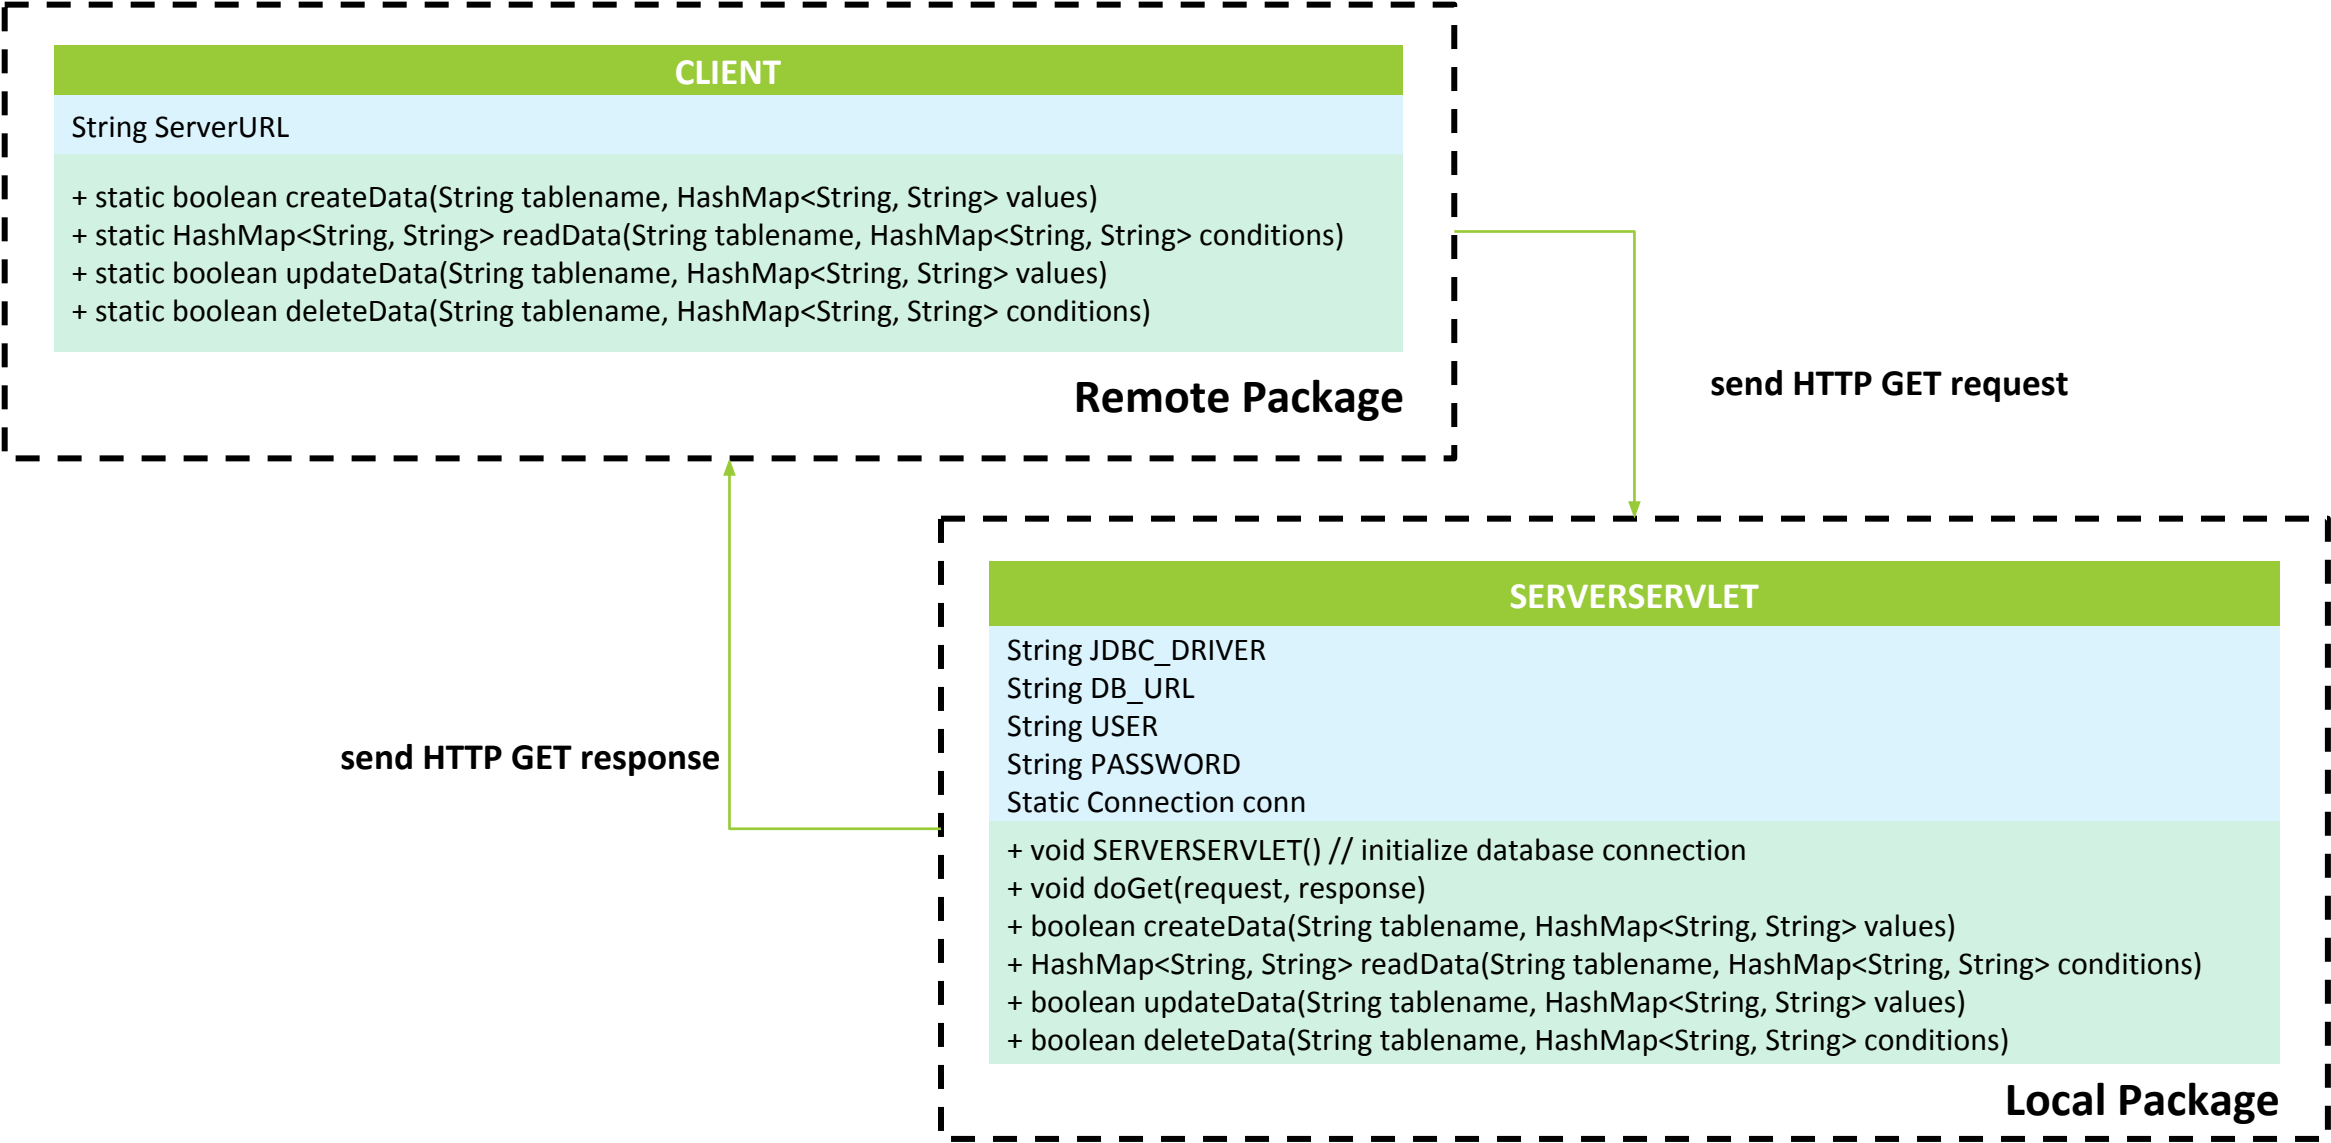

All TabButton will transfer to corresponding fragment within the same package, which does not display explicitly in diagram for cleanness and simplicity.

We create an intent for each switch between different activities.
